Visual Basic (VB)

1

Introduction :- Visual Basic is a windows programming language that has been developed at Microsoft Corporation.

Visual Basic is a powerful programming language to develop sophisticated windows programs very quickly. Visual Basic is one of the Rapid Application Development (RAD) tools as it enables the programmer to develop applications very easily and very quickly. It is an extension of BASIC (Beginners All-purposed Symbolic Instruction Code) programming language. Visual Basic applications are very popular as front-end to many Client/Server database systems like SQL Server, Oracle etc.

Visual Basic Application Development Cycle

There are the necessary steps to create a Visual Basic program. Programmers call these steps as development cycle.

⇒ Decide what we want the computer to do.

⇒ Decide how we want our program to look on the screen. The appearance of our program is called
