

has an .EXE file extension. Unlike a stand-alone EXE file is designed to work as an OLE server, which is nothing more than a program designed to share information with another program.

⇒ ActiveX Control — It creates a file that has an .OCX file extension. Unlike an ActiveX DLL or ActiveX EXE file, an ActiveX control usually provides both subprograms and an user interface that we can reuse in other programs.

⇒ ActiveX Document DLL — It creates a file with .DLL file extension. An ActiveX document DLL file is designed to help ~~you~~ us run programs on a web site.

⇒ ActiveX Document EXE — It creates a file that has as .EXE file extension. An ActiveX Document EXE file can display a Visual Basic form within an internet Web browser.

⇒ AddIn — It enables us to create an AddIn program specially designed
