

containers for controls. It is used to group option/radio buttons, and checkboxes.

(f) Command Button - The command button control carries out a command or action, when a user chooses it. It is also called clickable command button.

(g) Checkbox - It is also called multi-choice option control. The checkbox control displays a True/False or Yes/No option. We can check any number of checkboxes on a form at one time.

(h) Option Button - It is also called Radio Button or Single Choice option button. The option button as a part of an option group with other option buttons, displays multiple choices, from which a user can choose only one.

(i) Combo Box - The Combo box control combines a text box with a list box. It allows a user to type in a selection or select an item
