

## ⇒ Video Stream :-

Streaming video is content sent in compressed form over the internet and displayed by the viewer in real time. With streaming video or streaming media, a web user does not have to wait to download a file to play it. Instead, the media is sent in a continuous stream of data and is played as it arrives. The user needs a player, which is a special program that uncompresses and sends video data to the display and audio data to speakers. A player can be either an integral part of a browser or download from the software maker's website.

Real network first use Streaming Video on the Internet in 1995.

Streaming video refers to a technique for transferring data. Streaming video required high Compression, low resolution and low frame rates. This was acceptable short video clip.
